

TMU-IRES™

Instant Response Emergency Service

*Purpose-designed for Use
in Any Emergency Situation*

*To instantly activate all Service Units
to respond to an emergency,*

- 911 Service
- Ambulance with Paramedic
- Fire Engine with Paramedic
- ER & Triage
- Alert all EMS Providers to standby and be ready to receive and treat casualties

Typical Mode of Operation

Authorized Personnel (“AP”) at Accident Site taps “Subscriber”  to activate IRES with authentication through Voice Print or Facial Recognition.

Thereafter AP taps “MediResponse” , “Fire Department” , and “911”  and instantly has 3 units in one video conference session (“VC Session”) to hear and to see the incident / accident (“event”) being reported, to severally launch necessary actions required to deal with the event in the best ways possible including activating and inviting “ER & Triage”  and “Ambulance Fleet”  to be instantly connected to the VC Session.

The “OPTION”  may be pre-configured and renamed as “Group ER&T” for streaming the proceedings of the VC Session out to certain ER & Triage units of various other hospitals. With one tap on “Group ER&T” by any of the Parties in the VC Session, the discussion & interaction of the VC Session is streamed out to the Group ER&T.

Inimitable Functional Features

- Communication without Language Barrier
 - Each Party in the VC Session can easily select a preferred language with which to communicate with the other Parties.
 - All speech is transcribed, and the transcribed text is translated into text in the language of choice of the individual Party and then converted to speech by text-to-speech conversion - all automatically and in real-time.
- SWISTWIT (See What I See Touch What I Touch) Function
 - For greater clarity, each participant may make use of SWISTWIT function to do pin-pointing with finger or with a pin or a stylus.
- Out-dialing from within the VC Session to any telephone number (E.164 format) can be made to invite another Party to attend the VC Session.
- Inbound Call from another Party using a regular telephone or mobile handset can be made to a pre-set telephone number for them to join the VC Session, if required.
- The entire conversation & interaction of the VC Session is automatically recorded in real-time in multimedia.

***Very Easy to Use with
One-Tap Fast Connect Operation***

***When the Urgency is Now,
A Minute in Delay Can Result in Fatal Outcome***

TMU-IRES is an Invaluable Service!
